Watch Systems, LLC

Watch Systems is a privately held software development firm based in the New Orleans, LA area who specializes in sex offender registration and community notification software and services at a state and local level. Over the past six years we have refined a software solution as well as supporting services that are used by over 200 law enforcement and state agencies in twenty states. The success of our programs are due to our ability to link the technical service and support with the community's demand for relevant and timely information concerning sex offenders in a form that they can use.

A common misconception is that sex offender laws and enforcement are clear and consistent. The facts are:

- Sex offender management involves registration, verification and community notification, and virtually all 50 states have differing law and customs
- Merely posting offender data on a web site does not satisfy the citizens' need to know the proximity of registered sex offenders to their homes and schools
- Geographic Risk Assessments and proactive Email Alerts such as are provided by OffenderWatch are the best means available to satisfy the citizens' need to know
- Fueled by media coverage of high profile cases of offender recidivism, citizens have Zero Tolerance for law enforcement who merely minimally enforce the laws without aggressively doing all the law requires and more to inform and protect the citizens

Watch Systems is the only fully integrated, nationwide proven supplier of a demonstrable sex offender management software solution, bundled with proven expertise delivered on-site to raise the visibility with citizens of the solution, to gain widespread acceptance and use of the notification services. We have delivered under Law Enforcement Banners and logos millions of postal notification and emails. By partnering with Watch Systems, clients demonstrate that they are doing all that is possible to do to protect the public.

SECTION 2: INVESTMENT for the Lake County Sheriffs' Office

Software: OffenderWatch database, Website access and Geographic Searching and Mapping Services include Unlimited users, offenders and Email notifications

\$10,000 per year, based on counties with population between 200,000 and 600,000 – includes user training, Help Desk support, maintenance, quarterly street updates, US postal address updates, and continuous software upgrades as they are made available. Also includes Watch Systems Help Desk telephone email support for both email registrants and offender addresses including repair where possible of unmappable addresses.

Estimated total for 1st year is \$11,000 (10,000 plus \$500 one time for offender conversion and setup and \$500 one time for "protected address" setup) and for subsequent years is \$10,000

Investment Includes:

- Enterprise OffenderWatch software license with unlimited users
- Hosting Facility for the database and web servers
- Email Server and support for some customization of personalized emails from Sheriff
- Mapping License with streets and points of interest for your zip codes of responsibility
- Consulting and Computer-Based training
- Help Desk Support via toll free line and email

Postal Notification Cards: Optional and may be utilized if desired

Postage deposit required to open a mail account, this deposit will be based on your expected monthly volume of mailings, but at least \$500. We will look at your expected volume and arrive together at an appropriate deposit – Postal Notification Card mailings are provided at the rate of \$.41 each (US postage rate – currently \$.41) including the address rental, printing, addressing, postage, handling, database updates and maintenance – for each mailing there is a minimum of \$35, which equates to about 85 postal cards. We bill you for the mailings/postage on a weekly basis.

Since Watch Systems mails to high quality US Postal addresses, we will get very few returns or bad addresses, saving you money and time.

Initial Data File Conversion/ownership of Offender data and Safety Buffer Data

For an additional flat fee of **\$500/thousand offenders**, Watch Systems will load the initial registered offender data for your county into OffenderWatch, map the fields and verify results. Your agency remains the owner of all offender data maintained by Watch Systems servers on your behalf. If your agency will be using the Safety Buffer feature, we will, for an additional initial fee of **\$500/thousand 'protected addresses'**, key and verify these addresses and make sure they are properly loaded and established in OffenderWatch. Agency will provide addresses in a form we can readily work with. Protected addresses usually include institutions such schools, day-cares, parks, and other addresses for which the law in your jurisdiction has established a safety buffer. Per published policy statements and guidelines, you may download initially, periodically or at agreement termination a full unrestricted copy of your offender data. Watch Systems holds your data securely and maintains full confidentiality of your offender data. The email subscriber contract embedded in the registration process governs the email registrant confidentiality.

IMPLEMENTATION TIMELINE

Approx 30 Days or less from start of agreement

PAYMENT AND BILLING TERMS

We will invoice you for your first year of service upon execution and payment is due before startup

TERMS OF AGREEMENT

This is an automatically renewing services agreement that will renew on your anniversary unless cancelled in writing.
